I am aware of and will parallel your cautious view of color photography.

is now providing us with a much better quality color film, however. This in itself will increase interest in a number of quarters. Consequently, I recommend you read this assessment of the 50-242 color film .

The assessment is inconclusive, and I am happy to have it so at this stage. I am taking the line that we should continue to tack on a few hundred feet each time possible, in order to gain, over time, a wholesome feel for color on all kinds of activities.
